Thrane & Thrane

PRESS RELEASE

September 2, 2003

THRANE & THRANE TO INTRODUCE NEW DATA TERMINAL

Thrane & Thrane, the world's leading manufacturer of Inmarsat satellite communication terminals, now introduces the TT-3080M Capsat® Data Terminal. The new terminal is a further development of the existing Capsat® Messenger (M4)Terminal with a focus on the MPDS service.With MPDS the user is only charged by the amount of data sent and received and it is therefore an ideal solution for e-mail, scada applications, web and intranet access.

The TT-3080M Capsat® Data Terminal uses Inmarsat's Global Area Network Service which was introduced to meet the increasing demand for communication in isolated areas. It enables the users to bring their communication environment from their offices to anywhere in the world.

The Capsat® Data Terminal is an attractive addition to Thrane & Thrane's existing land mobile product family. The new terminal is enabled for data transfer at either 2,4 kbps, ISDN or MPDS.

The voice facility is not available on this terminal, making it smaller, less expensive and more suitable for data solutions.

The terminal is developed to be used for scada applications which are often run from unmanned locations and where data gathering and transmission is a necessity.

With the data terminal at hand Thrane & Thrane is expanding into new markets such as remote banking and rural social welfare programs. Simoultaneusly, the terminal provides an opportunity to penetrate and gain a bigger marketshare in the oil and gas market.

For the oil and gas market Thrane & Thrane expects to introduce an ATEX approved version of the data terminal.

The Capsat® Data Terminal will be commercially available from October 2003.
