

PRESS RELEASE

AUVSI 2010, 24 – 27 August, Colorado, Booth: 733

LAUNCH OF THRANE & THRANE'S AVIATOR 200 SWIFTBROADBAND SYSTEM REVOLUTIONIZES COMMUNICATIONS FOR UNMANNED AIRCRAFT SYSTEMS

Thrane & Thrane launches innovative broadband solution to unmanned aircraft market during AUVSI 2010

Leading satellite communications equipment manufacturer Thrane & Thrane kicks-off a revolution in airborne communications for the unmanned aircraft market during this year's AUVSI exhibition with the introduction of AVIATOR 200. The latest addition to Thrane & Thrane's cutting-edge portfolio is designed for Inmarsat's new SwiftBroadband 200 service. Through utilization of proven avionics and antenna technologies, the Thrane & Thrane AVIATOR 200 provides an exceptionally compact, lightweight system that offers reliable, high-speed connectivity for an extensive range of applications within the UAV, military and security sectors.

Thrane & Thrane's innovative AVIATOR 200 simultaneously provides data speeds up to 200 Kbps and a single AMBE 2 channel for real-time video, data and voice relay links between the aircraft and ground control stations. Data and voice services can be accessed via wired or wireless connections built into the AVIATOR 200, alleviating the need for external wired and wireless routers. Thrane & Thrane's launch of the AVIATOR 200 is particularly significant for smaller aircraft used for military, security and government applications where weight and size of the antenna system may be critical considerations. An exceptionally compact and lightweight system, the Thrane & Thrane AVIATOR 200 is set to revolutionize satellite communications for smaller aircraft operating in these sectors.

"The launch of the AVIATOR 200 system is a break-through in terms of providing real-time communications for smaller and unmanned aircraft. UAV and other military, security and government aircraft operators are set to benefit from the capability to transfer more information via video, data and voice link from the aircraft to the station on the ground. An incredibly compact and lightweight package, Thrane & Thrane's AVIATOR 200 fully supports the ongoing requirement for UAVs and the systems aboard them, to become smaller and more versatile," comments Kim Gram, Vice President, Aeronautical Business Unit, Thrane & Thrane.

Thrane & Thrane's introduction of the AVIATOR 200 is testament to the company's position at the forefront of innovation and technological development. Designed in accordance with Inmarsat's recently announced SwiftBroadband 200 service, Thrane & Thrane engineers have significantly reduced overall system size and weight as well

as cost and complexity of aircraft modifications required to install the system. This has been achieved while still developing a solution that provides a high level of service for the end user.

About Thrane & Thrane

Thrane & Thrane is the world's leading manufacturer of equipment and systems for global mobile radio and satellite communication. Since its incorporation in 1981, the company has established a strong position within global mobile communication solutions based on the Inmarsat system and today, Thrane & Thrane provides equipment for use on land, at sea and in the air. The company's communication products are sold throughout the world under the brands Thrane & Thrane, EXPLORER[®] SAILOR[®] and AVIATOR through distributors and partners. Thrane & Thrane is listed on NASDAQ OMX Copenhagen (symbol: THRAN). www.thrane.com.
